Please provide a brief description of your laboratory – history, location, etc. Also describe main activities – clinical/teaching/research (maximum 150 words).

Derby gait lab has been established since 1994, and is well equipped for motion analysis, based on a 14-camera BTS system. The team includes a Lead Bioengineer with over 15 years clinical gait experience, a research physiotherapist with 8 years gait experience, a technologist and secretary. We also have input from a Consultant Paediatrician and Consultant in Rehabilitation Medicine.

Our main activity is clinical, and we assess adults and children with a wide range of walking problems. We run an annual gait course, and provide teaching sessions to different clinical teams as required. We are actively involved in research with several different current projects including an RCT, and several PhD theses completed.
